Project Review
for Members

FENI members are entitled to a complementary project review.

“Through the project review I was able to reduce my insurance costs and have my land rates re-assessed. It is the little things that makes all the difference.”

Gary Campbell, Co Tyrone

What is a Project Review?

For most generators, it has now been a number of years since their generator was commissioned. A project review is a bespoke FENI service that is personalised to your renewable project.

It gives you the opportunity to sit down with a member of our staff and review how your generator is performing.

How to keep within the regulatory parameters of Ofgem and NIE, such having the documentations in place for an Ofgem Audit, Grid Code and G59 compliance.

You will discover how efficient your generator is and how to maximise your income, if your site has the potential for Repowering, where do you see yourself in the next 5, 10, 15 years and if you are interested in selling your project. Is your site suitable for battery storage, are your ROCs traded correctly and are you on the best PPA rate in the marketplace? Have you received the correct tax advice for your turbine or want to invest in our unique renewable energy bond?

You will discover how efficient your generator is and how to maximise your income

Many more aspects of your generator will be discussed, is your turbine correctly insured and with the right broker, is your O&M provider doing the basics or are they looking at the long term health of your turbine, is anyone analyzing the historic and current production data?

Everything will be covered to ensure your asset is working at its most efficient level, from a practical and administrative point of view. Treat the project review as a measurement tool, to measure how far you have come with your renewable generator.

Remember, if you don't measure it, you can't improve it.

Review Process

The project review is a very simple process and a FENI member of staff will stay with you through every step.

- **Step One:** Get in contact with FENI and book your free project review.
- **Step Two:** Pull together as much information you have on your generator. FENI can guide you on what are the critical pieces of information.
- **Step Three:** Sit down with a member of staff at FENI and have an open discussion on how your generator is performing. Together we can understand where the generator is presently at and where it could potentially be.
- **Step Four:** FENI will analyse the information on your generator and advise you if any steps are required to improve your generating station.
- **Step Five:** FENI can help you implement any actions, if any are needed to improve your generating station.

Remember,
if you don't measure it, you
can't improve it
